PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years of experience shipping production web applications across the JavaScript and Python ecosystems. Specializes in React/Next.js front-ends, Node.js (Express/NestJS) back-ends, and real-time systems on WebSockets. Proven track record of optimizing APIs and database queries to cut latency, building live features (chat, auctions, notifications) that lift engagement, and deploying monitoring tooling that reduces production incidents. Comfortable owning features end-to-end, from architecture to deployment and observability.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP

Frontend: React, Next.js, Vue.js, React Native, Ionic, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, NestJS, Laravel, Django, REST APIs, WebSockets

Databases: MongoDB, PostgreSQL, MySQL, Firebase, Supabase

DevOps & Tools: Git, GitHub, Docker, CI/CD workflows, monitoring & alerting

Soft Skills: Teamwork, problem-solving, adaptability, critical thinking

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Jadded

Jan 2023 – Present

- Architected and deployed production full-stack applications on Next.js, Node.js, and MongoDB serving real-user traffic in production.
- Optimized RESTful APIs and database queries to reduce inter-service latency and measurably improve platform stability under load.
- Built real-time features — live chat, live auctions, and instant notifications — using WebSockets, driving higher user engagement and session length.
- Engineered an automated monitoring and alerting system that surfaces incidents proactively, shortening detection time and easing platform maintenance.

IoT Developer — Webased

Aug 2022 – Oct 2022

- Designed an automated irrigation system in Python that triggers watering based on sensor thresholds, reducing manual intervention and water waste.
- Built a cross-platform monitoring dashboard with Ionic, enabling real-time remote configuration and oversight of field hardware.
- Developed a Node.js backend to ingest and persist high-frequency sensor data into MySQL, powering threshold-based automation logic.

PROJECTS

Cedra — Full-stack e-commerce platform with a curated retail catalog and Stripe checkout

Code: <https://github.com/RamiAtallah1/cedra-ecommerce>

Stack: PHP 8.4, Laravel, Sanctum, Vue 3, Vite, Pinia, Tailwind CSS, PostgreSQL 16, Stripe

- Designed and built a versioned REST API in Laravel with Sanctum-based auth, powering product discovery, guest and member carts, and order tracking end-to-end.
- Integrated Stripe Payment Element for secure card payments, handling client-side confirmation, webhooks, and order state transitions with idempotent processing.
- Built the storefront in Vue 3 with Pinia state management and Tailwind, delivering a responsive product-catalog and checkout experience across devices.

RAG Document Q&A — *Chat with your PDFs — Gemini answers grounded strictly in uploaded documents*

Code: <https://github.com/RamiAtallah1/pdf-rag-chat>

Stack: NestJS, TypeScript, React, Vite, PostgreSQL + pgvector (Docker), Google Gemini (gemini-2.5-flash, gemini-embedding-001)

- Built a Retrieval-Augmented Generation pipeline: PDF ingestion, chunking, embedding with gemini-embedding-001, and semantic search over pgvector to retrieve top-k passages per query.
- Enforced source grounding by having Gemini answer only from retrieved chunks, surfacing filename and page for every citation and returning a clear refusal when the documents lack an answer.
- Delivered a NestJS API and React chat UI with streaming responses, containerized the database and vector store with Docker for a reproducible local setup.

Social Cross Poster — *Schedule one post and auto-publish it to Facebook, Instagram, and TikTok*

Code: <https://github.com/RamiAtallah1/social-media-scheduler>

Stack: Node.js, Express, TypeScript, PostgreSQL, Redis + BullMQ, Supabase, Vue 3, Vite, Pinia, Tailwind

- Architected a TypeScript monorepo with an Express API + BullMQ workers that schedule and dispatch posts to Facebook, Instagram, and TikTok via their official platform APIs.
- Integrated Supabase for media storage with an automated 7-day post-publish retention policy, freeing storage while preserving publish history.
- Built the scheduling UI in Vue 3 + Pinia, letting users select platforms, upload media, and pick publish times, with per-platform status feedback once workers complete each job.

EDUCATION

B.Sc. Computer Communication and Network Engineering

Lebanese University • 2019 – 2022

LANGUAGES

Arabic — Native

English — Professional Working Proficiency
